## Liquid Fish Soil Enhancer

Made with Pure Hydrolyzed Fish, Brown Algae and Chitosan/SA (Naturally Derived Salicylic Acid)

NPK 2-3-1

### Why Liquid Fish?

Liquid fish soil enhancer, also known as fish fertilizer, is a natural and organic product derived from fish or fish byproducts. It is used to enhance the quality and fertility of soil in gardening and agriculture. Fish fertilizer contains a wide range of essential nutrients such as nitrogen, phosphorus, and potassium (N-P-K), as well as trace elements like calcium, magnesium, and sulfur. These nutrients are vital for plant growth and development. Liquid fish soil enhancer is typically made from sustainable and renewable fish sources. It is considered an organic fertilizer because it is derived from natural materials, making it an environmentally friendly choice for gardeners and farmers who want to avoid synthetic chemicals. Fish fertilizers are often formulated to release nutrients slowly over time. This slow-release characteristic ensures a steady supply of nutrients to plants, promoting healthy growth and minimizing the risk of nutrient imbalances or fertilizer burn.

### What is Chitosan with Natural Salicylic Acid?

The combination of chitosan with natural salicylic acid derived from willow bark offers a powerful and environmentally friendly approach in gardening and agriculture. When these two compounds are combined, their complementary properties can provide synergistic benefits for plant health, disease management, and growth promotion.

### What is Brown Algae Extract?

Brown Algae Extract is eco-friendly and a sustainable alternative that is rich in bioactive and biostimulating compounds, macro and micronutrients, minerals, vitamins, and growth-promoting substances. Their high polysaccharide content improves root growth and plant health.

32 OZ (1 Quart)  
Model: TPCH-32

64 OZ (1/2 Gallon)  
Model: TPCH-64
